

OrthoPure[®] XT

as ligament replacement
in the knee

Eliminate donor-site
morbidity, restore mobility.

**Strong.
Safe.
Consistent.**

TRX Orthopaedics
Limited

OrthoPure® XT

OrthoPure® XT is a porcine tendon graft that has been treated with the patented dCELL® decellularisation technology, which gently cleanses the tissue while preserving its natural collagen structure.

Eliminates harvesting morbidities

- Morbidities associated with autograft harvesting remain a significant problem (Sim et al., 2022)
- Strength deficit, restricted mobility, and anterior knee pain are common complaints following autograft harvesting (Kartus et al., 2001)

Significantly reduces surgical time

- Saves valuable operating time by avoiding autograft harvesting
- No thawing required

Off-the-shelf solution, ready to use

- Storage at room temperature
- No change in surgical technique required
- No additional instruments required

Always the correct size

- Thickness selectable between 5–11 mm
- Minimum length of 120 mm when folded
- For the reconstruction of ligaments in and around the knee joint
- Consistent tissue quality with a reliable supply

Safe

- Patented dCELL® technology guarantees the safe use of OrthoPure® XT

**A replacement
for autograft
in and around
the knee
joint**
